We recommend that you protect your networks from harmful outdoor environments and destructive ESD events with industrial-grade, shielded Ethernet cable from Ubiquiti. For more details, visit ui.com/toughcable Surge protection should be used for all outdoor installations. We recommend that you use two Ethernet Surge Protectors, model ETH-SP, one near the NanoStation and the other at the entry point to the building. The ETH-SP will absorb power surges and safely discharge them into the ground. Hardware Overview Power LED The LED will light green when an active Ethernet connection is made to the Main/LAN port and flash when there is activity. LAN2 LED (NanoStation M2/M3/M5) only) The LED will light steady green when an active Ethernet connection is made to the Secondary port and flash when there is activity. Signal LEDs In airOS®, you can modify the threshold values for the wireless signal strength LEDs on the Advanced tab under Signal LED Thresholds. The default values are shown below: Secondary Port (NanoStationM2/M3/M5 only) This 10/100 Ethernet port is used for bridging and supports software-configurable PoE passthrough on the Secondary port, a 24V, 1A PoE adapter is required. Main/LAN* Port This 10/100 Ethernet port is used to connect the power and should be connected to the LAN and DHCP server. Reset Button To reset to factory defaults, press and hold the Reset button for more than 10 seconds while the device is connected to a power source. LAN1 LED The LED will light steady green when an active Ethernet connection is made to the Main/LAN port and flash when there is activity. Signal LEDs In airOS®, you can modify the threshold values for the wireless signal strength LEDs on the Advanced tab under Signal LED Thresholds. The default values are shown below: RP-SMA Antenna Connector Reserved for future use. Main/LAN Port This 10/100 Ethernet port is used to connect the power and should be connected to the LAN and DHCP server. Reset Button To reset to factory defaults, press and hold the Reset button for more than 10 seconds while the device is powered on. Alternatively, the device may be reset remotely via a Reset button located on the bottom of the PoE adapter. Installation WARNING: The switch port must comply with the power specifications listed in this Quick Start Guide. OR Optional Accessing airOS Verify connectivity in the airOS Configuration Interface. Make sure that your host system is connected via Ethernet to the device. Configure the Ethernet adapter on your host system with a static IP address on the 192.168.1.x subnet. Launch your web browser and type in the address field. Press enter (PC) or return (Mac). Enter ubnt in the Username and Password fields. Select your Country and Language. You must agree to the Terms of Use to use the product. Click Login. The airOS Configuration Interface will appear, allowing you to customize your settings as needed. For details, refer to the User Guide available at ui.com/download/airmax You can also manage your device using the Ubiquiti® Network Management System. Setup using the UNMS[™] app requires the U-Installer, sold separately. Installer Compliance Responsibility Devices must be professional installer to assist in meeting regulatory requirements. Username Password ubnt ubnt Thu, 12/05/2019 - 11:45 #1 Can't log in to Ubquiti NanoStation M2 NSM2US after configuring Logged into my new Ubquity NanoStation M2 version 6.1.7 (XW) on my Windows 10 Home LAN is 192.168.1.27. I found the NanoStation at 192.168.1.20. I used the 3.19.3.0 factory firmware, transfer successful. I found the NanoStation at 192.168.1.1. I went to the Basic Radio Setup page and changed my Node Name, Password, Channel, and Power. When I Save Changes, I can no longer find the NanoStation. I tried the links from the Basic Radio Setup page, 192.168.1.1, 192.168.1.20, I tried pinging, I tried Advanced IP Scanner and it only finds my Intel desktop at 192.168.1.127 and .1.255. I tried holding the NanoStation reset while power-up; then the 3.19.3.0 again. Successful transfer, Basic Radio Setup, and can't find it after Save Changes. I had my AREDN friend do it instead of me. No difference. I tried loading 3.18.9.0 factory. No difference. We tried multiple times. Even booted the Windows desktop. What am I doing wrong? A complete list of usernames and password is as easy as 1,2,3. Look in the left column of the Ubiquiti router password list below to find your Ubiquiti router model number. Look one column to the right of your router model number to see your Ubiquiti router's user name. You know the drill. Look another column to the right to find your Ubiquiti router's password. Great! You've found the password and username for your Ubiquiti router! What next? Login to Your Ubiquiti Router Using the Router Password Try logging into your Ubiquiti router using the username and password. Don't Know How to Login to A Ubiquiti Router IP Address Into an Internet Browser's Address Bar Submit Your Ubiquiti Router Username and Password. When Prompted By Your Router For more information on how to login to your Ubiquiti router please see our Free Guides. Still can't login to your Ubiquiti router even when using the username and password for your router? Reset Ubiquiti Router Password To Default Settings (Use this as a last Resort!)
